

SHASHANK SURYAVANSHI

Full Stack Engineer

SUMMARY

Senior Full Stack Developer / Solution Architect with 7+ years of enterprise software development experience specializing in scalable web applications, enterprise workflow systems, cloud deployments, banking platforms, logistics solutions, manufacturing systems, and AI-enabled enterprise applications. Proven expertise in designing and developing modern enterprise-grade applications using .NET Core, ASP.NET, Angular, ReactJS, Java, REST APIs, SQL Server, MySQL, Docker, Azure, and cloud-native deployment workflows. Strong experience in full SDLC execution including architecture planning, requirement gathering, backend API development, frontend engineering, database optimization, deployment automation, and enterprise system integrations. Experienced in delivering scalable business solutions across banking, logistics, manufacturing, HRMS, cybersecurity, asset management, project management, and enterprise SaaS domains for clients across India and international markets.

HIGHLIGHTS

- .NET Framework, .NET Core, ASP.NET MVC, Web API enterprise application development
- Java JPA, REST APIs, Web Services & enterprise integrations
- Angular, ReactJS, JavaScript, jQuery, AJAX, JSON
- Enterprise SPA architecture development
- SQL Server, MySQL, MongoDB database design & optimization
- Azure cloud deployment & hosting experience
- Docker-based deployment & containerized applications
- Vercel, Railway & GoDaddy deployment workflows
- Authentication & Authorization implementation (JWT, OAuth2.0, OWIN)
- Single Sign-On (SSO) & Active Directory Integration (ADFS)
- Enterprise workflow automation systems
- Asset Management & Inventory Management platforms
- Banking & Financial onboarding systems
- Logistics & Transportation management applications
- Production & Manufacturing workflow systems
- Cybersecurity vulnerability analysis platforms
- Responsive enterprise UI/UX implementation
- REST API integration & backend communication
- DevExpress, Telerik & enterprise third-party control customization
- Enterprise dashboard & reporting solutions
- Performance optimization & database tuning
- CI/CD collaboration & deployment support
- Agile development lifecycle & sprint participation
- Client communication, requirement gathering & delivery management
- Code reviews, debugging & production issue resolution
- AI-enabled productivity workflows & enterprise modernization initiatives
- Scalable multi-tier architecture implementation
- Enterprise SaaS product development

EXPERIENCE

Devstringx Technologies Pvt Ltd
Sr. .NET Developer

- Defined and implemented enterprise development and release processes for scalable application delivery.

- Provided technical leadership, release planning, and architecture guidance across multiple enterprise projects.
- Participated in architecture governance and strategic technical decision-making processes.
- Collaborated with multiple vendors and cross-functional teams for enterprise integrations and project execution.
- Worked extensively with DevExpress and Telerik enterprise controls including deep customization and reporting solutions.
- Led client communication, requirement gathering, implementation planning, timeline definition, and project handover processes.
- Designed and developed scalable n-tier enterprise applications using .NET technologies and modern frontend frameworks.
- Implemented database architecture, object modeling, API integrations, and backend optimization strategies.
- Developed secure enterprise APIs and authentication systems including OAuth2.0, OWIN, ADFS, and Single Sign-On integrations.
- Worked on enterprise asset management, workflow automation, ticketing systems, and inventory management platforms.
- Provided production deployment support, issue resolution, and system maintenance for enterprise clients.
- Worked closely with QA teams, developers, and stakeholders to ensure high-quality enterprise software delivery.
- Contributed to enterprise modernization initiatives using .NET Core, Angular, cloud deployment workflows, and AI-enabled solutions.

Sr. .NET Software Developer Full Stack Developer

- Upgraded legacy enterprise systems to modern web technologies with enhanced scalability and maintainability.
- Designed and developed enterprise desktop and web applications for operational automation and workflow optimization.
- Created and maintained technical documentation, user manuals, and operational procedures.
- Worked on software planning, implementation, monitoring, and reporting within Agile development environments.
- Developed backend APIs, synchronization services, and enterprise integration workflows.
- Participated in a full software development lifecycle including analysis, architecture, development, testing, and deployment.
- Performed integration testing, code reviews, debugging, and performance optimization.
- Delivered technical training, knowledge transfer sessions, and production support for enterprise applications.
- Recommended and implemented technology upgrades, infrastructure improvements, and application modernization strategies.
- Maintained and enhanced large-scale enterprise applications with focus on performance, scalability, and maintainability.
- Collaborated with clients and business stakeholders to transform business requirements into production-ready solutions.

ENTERPRISE PROJECT EXPERIENCE

MSNAGILE – Enterprise Agile Project Management Platform

- Developed large-scale project management and agile workflow system supporting sprint planning, backlog management, retrospection, estimation, and testing workflows.
- Built scalable Angular SPA modules integrated with REST APIs and enterprise backend services.

- Implemented interactive dashboards, workflow automation, payment gateway integration, and Google Maps functionality.
- Worked extensively on enterprise UI/UX enhancements and reusable component architecture.

Technologies:

Angular 7, Angular Material, REST API, Bootstrap, JWT, Google APIs, PHP, Ngx-Bootstrap

YESPLS – Enterprise E-Commerce Marketplace

- Developed a large-scale e-commerce ecosystem enabling online buying, selling, inventory management, delivery tracking, and seller operations.
- Built responsive SPA architecture and integrated REST APIs, Google Maps, and enterprise workflows.
- Worked on interactive frontend modules, animations, delivery management, and product listing systems.

Technologies:

Angular 9, Angular Material, Bootstrap, JWT, Google Maps, REST APIs, PHP

CDCU & Amboy – Enterprise Banking Solutions

- Developed banking and financial onboarding systems supporting account registration, joint accounts, business portals, and digital banking workflows.
- Integrated enterprise APIs and Salesforce workflows for customer onboarding and account management.
- Built secure frontend modules and responsive enterprise banking interfaces.

Technologies:

Angular 12, Java, REST APIs, JWT, Salesforce Integration

CloveHRMS – Human Resource Management System

- Designed and developed enterprise HRMS modules managing employee lifecycle, compliance, and workforce operations.
- Worked on backend APIs, database architecture, and Dapper-based optimization strategies.

Technologies:

.NET Core 6, SQL Server 2019, Dapper

CIM Integration – Cybersecurity & Vulnerability Analysis Platform

- Developed enterprise security analysis platform for vulnerability detection, issue tracking, and application security scanning.
- Implemented frontend issue highlighting systems and interactive security reporting dashboards.
- Worked on backend integration for code analysis and vulnerability classification workflows.

Technologies:

Java JPA, Angular, Spring Boot, REST APIs

Backhaul Direct – Logistics & Transportation Platform

- Developed enterprise logistics management application handling shipment workflows, inventory movement, transportation tracking, and delivery operations.

- Built operational dashboards and backend logistics workflow systems.

Technologies:

ASP.NET, SQL Server, REST APIs, Bootstrap

NXP & Tiger – Manufacturing & Industrial Automation Systems

- Developed enterprise production management systems for textile manufacturing workflows, inventory tracking, machine integration, and operational monitoring.
- Worked on industrial automation integrations and production workflow optimization.

Technologies:

.NET Core Web API, Java JPA, Angular, SQL Server

QuickReviewer – Enterprise Review & Approval Platform

- Built collaborative proofing and approval platform enabling managers and reviewers to validate documents and workflows.
- Developed responsive Angular modules and enterprise review systems.

Technologies:

Angular 9, Angular Material, REST APIs, Ant Design

EDUCATION

Master of Computer Applications

LANGUAGES

- English
- Hindi

PERSONAL INFORMATION

Date of Birth: 26 December 1995
